Girmiti Software — DevOps Engineer (AWS)

Bangalore · 10–14 yrs · Payment services provider (banking, transit, e-commerce, telecom, sports, healthcare clients across US/EMEA/Canada/APAC) · ISO 9001:2008 & ISO/IEC 27000:2013, CMMI L3

> **Positioning:** this is a payments-domain infra role, which lines up directly with your Barclays and Russell Investments banking background — lean on that, not just AWS years. The JD's SOC 2 / PCI DSS audit-support line is the standout differentiator versus a generic AWS-ops posting, and your AZ-104 / SC-300 / SC-100 certs are worth framing as security-architecture thinking that transfers cloud-agnostically, with AWS hands-on (6+ yrs) as the primary claim. 123 questions across 16 topics, weighted toward what's distinctive in this JD: PCI/SOC2 compliance, TLS/mTLS & certificate rotation, and the Bamboo/Bitbucket/Maven/Gradle/Nexus toolchain.
